

EAST1

Capture willows in foreground, well in midground.
Get high to ensure large area of sedge, capture view over willows.
2019 view is best.

EAST2

Capture willows to left, well with mixed herbaceous, and sedge to the right.
Add camera to capture all. 2018 has no willow. 2019+ has no sedge.

EAST3

Capture willows to left.

Well divides sedge to left and mixed herbaceous to right.

Capture slightly more sedge area to the left?

KILN1

Repeat 2021. No willows in this area.

Mixed herbaceous in foreground, sedge in background with both wells.

Barely capture downed log in foreground, but not as much as 2019.

KILN2

Repeat 2021. Capture willows to left background, missed in 2019.
Capture all wells, especially sedge at nearest well.
Don't need sky. Avoid too many rocks. More large meadow veg patches.

KILN3 + KILN4

Kiln 3: Capture both wells, possibly willow in background to the left.

Kiln 3W: **Add cam** for clear willow view

Kiln 4: Captures willows at left background, sedge in midground, mixed herbaceous in foreground. More meadow with height?

LO1

Capture willow in background, probably enough pixels, less mixing.
Willow in foreground has more pixels, but mixed with sedge.
Clearly capture sedge, probably in foreground. Go higher?

LO2

Less pines, more meadow, may need to be higher up in tree.
Clearly capture sedges in background near pines, to left of willows.
Repeat 2019-2021.

LO3

Repeat 2021 with full willows, sedge in front of willows, plus mixed herbaceous.
Go higher for more meadow veg?
If possible, avoid pine shadows to the right.

UP1

Capture willows to the left, mixed herbaceous in foreground, sedge to right of mid-pine.
Repeat of Jun 2019 is best, possibly with more meadow less forest.

UP2

Repeat 2019. Capture willows in background, not the one to the right.
Need height to capture sedge in front of willows and mixed herbaceous in foreground.
